

At VIP we believe the grow tube you choose should prioritize the health and safety of your vines from the start. That's why we only offer **Plantra® JumpStart® Grow Tubes**. Designed by the folks who first introduced grow tubes to California vineyards, today's JumpStart is the result of more than three decades of greenhouse microclimate engineering.

Why JumpStart® is The Growers Choice

“Vine Safe” Design Grows Bigger Vines. Sooner. JumpStart® creates a safe and ideal environment for young grapevines by combining optimized sunlight management with a nurturing greenhouse microclimate. The result is faster establishment, larger vines, and healthier root systems that deliver exceptional root-to-shoot balance. A stronger start means vines reach the fruiting wire sooner, enter production earlier, and produce larger, more consistent harvests throughout the life of the vineyard.

Microclimate Benefits

- Faster vine establishment
- Larger, healthier root systems
- Balanced root-to-shoot growth
- Earlier and sustained fruit production
- Higher long-term vineyard productivity

Reduce Labor. Lower Costs

Establishing a vineyard is expensive. JumpStart helps reduce those costs by protecting young vines while eliminating many of the labor-intensive tasks associated with early vineyard establishment.

Its protective microclimate shields vines from wind, browsing animals, herbicide damage, and other environmental stresses, resulting in higher survival rates and dramatically fewer replants.

At the same time, JumpStart naturally guides shoots upward toward the fruiting wire, eliminating the need for early vine-training passes until after the leaders emerge from the tube.

The translucent sidewalls allow sunlight to reach the vine while keeping herbicide sprays off tender stems, making weed control faster, easier, and safer.

Cost Benefits

- Higher vine survival
- Fewer replants
- Reduced labor costs
- No early vine-training passes
- Faster, safer weed control
- More uniform vineyard establishment
- Greater crew efficiency

Built Tough for Years of Service

JumpStart is engineered for demanding vineyard conditions using premium UV-stabilized materials that withstand years of sun, wind, weather, and field use.

Unlike disposable products, JumpStart is designed to be reused across multiple plantings, lowering your cost per established vine and delivering outstanding long-term value.

Construction Benefits

- Rugged, commercial-grade construction
- UV stabilized for years of outdoor performance
- Reusable season after season
- Lower lifetime establishment costs
- Excellent return on investment

A Better Start Means a Better Vineyard - Every feature of JumpStart is engineered with one goal in mind: helping growers establish healthier vineyards faster while reducing labor and maximizing profitability.

JumpStart helps you:

- Grow bigger, healthier vines faster
- Reach the fruiting wire sooner
- Reduce labor and replant costs
- Improve vineyard uniformity
- Increase long-term yields
- Maximize return on every acre planted

**Choose JumpStart and launch your vines on the fast track to earlier,
larger and sustained harvests and higher vineyard profitability.**
